

Concussion Recovery

A **concussion** is a blow to the head that causes the brain to move back and forth quickly. It is a type of traumatic brain injury.

If you have symptoms after a concussion, it doesn't mean that you will have complications or permanent brain damage. Most people who have a concussion will recover in a few hours, a week, or a few months.

Common causes of concussion include:

A car or bike crash

A fall

An assault

A sports injury

Most people who have a concussion have temporary symptoms that last for a brief time.

Common Concussion symptoms include:

Fatigue

A headache

Dizziness

Memory problems

Trouble thinking clearly

Issues with noise or bright light

Nausea

Poor concentration

Changes in mood or sleep

Blurry or double vision

Short-term disorientation

Irritability

To improve concussion symptoms, you should

Slow down and pace yourself.

Relax for a few hours or a day and slowly increase activity.

Try light exercise and mental activities.

Ask for support from work or school.

If you have concerns about your recovery, talk to your doctor.
Go to the emergency room right way if you notice varying levels to your awareness or motor abilities over the course of hours or days.

Did you know?

Repeated concussions can have a cumulative effect. It is important to take steps to prevent future injuries.

Support from your family and friends
can be helpful after a concussion. You may also want to talk to others who have been through similar experiences.
